Business & Finance

[ProQuest document link](#)

FULL TEXT

Mortgage rates edged down to their lowest level of the year to 6.58%, offering a dash of hope to prospective buyers who have been forced to the sidelines by elevated rates and home prices.

Wholesale prices rose at the sharpest monthly rate in three years, raising fears that tariffs are pushing up inflation. The stock market's rally stalled after the report. The Dow and Nasdaq each lost less than 0.1% while the S&P 500 rose less than 0.1% for its 18th record close of 2025.

U.S. exports of distilled spirits to Canada have fallen 62% and wine exports dropped 67%, since Trump initiated a series of trade battles early this year, an industry group says.

Workers across nearly all age groups are investing record portions of their 401(k) accounts in equities.

Intel and the Trump administration are discussing the possibility of the U.S. government taking a financial stake in the troubled chip maker, according to people familiar with the matter.

Electric truck maker Rivian says the rollback of U.S. fuel-economy rules is holding up \$100 million of revenue.

Warren Buffett's Berkshire Hathaway sold shares in Apple during the second quarter, further paring its position.

Ulta and Target are ending a four-year partnership.

Tapestry shares tumbled after the company forecast a difficult year ahead for its Kate Spade brand.

Deere lowered the high end of its full-year outlook.

U.S. News: Wholesale-Price Jump Raises Tariff Alarm --- The sharp rise complicates the picture for expected rate cut next month

Grossman, Matt . Grossman, Matt.

[ProQuest document link](#)

FULL TEXT

Wholesale prices -- the cost of goods and services purchased directly from producers -- rose at the sharpest monthly rate in three years, raising fresh alarm that tariffs are taking root in the economy and pushing up inflation.

The data complicates the picture for an anticipated interest-rate cut at the Federal Reserve's next meeting in September by nudging the central bank's inflation gauge in the wrong direction.

Prices charged by U.S. manufacturers and service providers rose by 0.9% month over month in July, the Bureau of Labor Statistics said Thursday, the biggest month-over-month increase since March 2022.

The increase spanned prices of wholesale goods, from food to tires, which jumped by 0.7% from a month earlier. The prices of business-to-business services were up by 1.1% in July versus June.

The data offer insight into price pressures companies themselves are facing months into a tumultuous season of on-again, off-again tariffs. Wholesale prices for computers, household appliances and furniture all climbed.

The report issued Thursday, known as the producer-price index, is volatile, and many analysts look to it more as a gut check on the inner gears of commerce than as one of the economy's primary vital signs.

An earlier inflation report this week showed that consumer prices on an array of goods, excluding food and energy, rose a little faster than economists had expected.

Together, the two reports offer a clearer picture of the path of inflation and contribute to a key gauge of prices that the Fed uses to make decisions about interest rates.

Economists had predicted President Trump's global trade war would cause a surge in prices. That hasn't happened.

Instead, consumer prices have edged up more slowly. Businesses have said they are eating the costs of tariffs for now, but some have warned they would start to pass on costs to consumers.

Thursday's "report is probably a sign of what's to come for consumers down the line," said Matthew Martin, an economist at Oxford Economics.

Stephen Stanley, an economist at investment bank Santander, wrote in a note to clients Thursday that the new figures "clearly indicate that more is coming in terms of tariff-related price increases."

One of the most important roles of the survey -- in which the BLS canvasses thousands of businesses for how they are setting prices -- is as a data source for the broad inflation metric the Fed targets.

That number, called the personal-consumption expenditures price index, won't be updated until the end of August. But economists can combine Thursday's data with the earlier inflation report this week to forecast it with great accuracy.

After Thursday's report, many Wall Street economists are projecting the personal-consumption expenditures price index likely rose by about 0.3% last month. That would push 12-month core PCE inflation up to 2.9% through July, up from 2.8% a month earlier -- and farther away from the Fed's 2% target.

Short-term U.S. Treasury yields ticked higher after the report landed, a sign traders were second-guessing how low the Fed will bring interest rates in the months ahead. Bets on what the Fed will do at its next meeting, on Sept. 16-17, still heavily favored a rate cut, but shifted slightly toward the possibility of a continued pause.

In a television interview after Thursday's data was published, St. Louis Fed President Alberto Musalem said the figures show "risks that inflation could be more persistent." He added that his concerns about the labor market have also grown following sharp downward revisions to job-creation figures this month, and that he hasn't prejudged what the Fed should do in September.

U.S. News: U.S. Weighs Possibility Of Taking Intel Stake

Whelan, Robbie; Thomas, Lauren; Ramkumar, Amrith . Whelan, Robbie; Thomas, Lauren; Ramkumar, Amrith.

[ProQuest document link](#)

FULL TEXT

Intel and the Trump administration are discussing the possibility of the U.S. government's taking a financial stake in the troubled chip maker, according to people familiar with the matter, in a deal that could advance the president's America-first manufacturing agenda while relieving political pressure on the company's beleaguered chief executive.

Trump discussed the idea -- which is still in early stages and could fall apart -- during a meeting Monday at the White House with Intel CEO Lip-Bu Tan, according to some of the people.

Details of how such an arrangement would be structured are still being hashed out, the people said. News of the discussions was reported earlier by Bloomberg.

"Intel is deeply committed to supporting President Trump's efforts to strengthen U.S. technology and manufacturing leadership," the company said.

Intel shares ended the day up more than 7% and rose further after hours.

Last week, Trump called for Tan to step down as head of Intel, writing on his Truth Social platform that the CEO was "highly conflicted," a reference to Tan's investments in Chinese technology companies.

The Trump administration has been seeking ways to increase American market share in semiconductor manufacturing. Officials have described Intel as the domestic company with the best chance of taking on Taiwan Semiconductor Manufacturing Co., the dominant player in chip fabrication.

Tech companies across the board have been rushing to boost or emphasize their U.S. investments to win favor with the president and get favorable policies. "This administration knows how much leverage they have over the tech industry," said Jim Secreto, who served as deputy chief of staff in the Biden administration Commerce Department.

A deal would add to the list of personal interventions by Trump in the U.S. private sector. He recently secured a commitment by Nvidia and Advanced Micro Devices to pay the government 15% of their sales in China in exchange for export licenses. In Nippon Steel's takeover of U.S. Steel, he received a "golden share" giving the president sway over how the company operates.

In the first Trump administration, Attorney General William Barr suggested the U.S. take stakes in telecom companies that are rivals to China's Huawei, though the plan didn't go forward.

Some industry analysts think Intel might eventually need government assistance.

"Depending on how it's structured, such a stake could give the U.S. government influence over and insights into Intel's activities, especially when it comes to China," said Mira Ricardel, who served as undersecretary of commerce for industry and security in the first Trump administration.

U.S. News: BLS Pick Has Forged Partisan Path --- Nominee has praised Trump's policies but lacks the experience of his predecessors

Kiernan, Paul . Kiernan, Paul.

[ProQuest document link](#)

FULL TEXT

Conservative economist Erwin John "E.J." Antoni sometimes jokes on social media that the "L" in BLS is silent. President Trump this week tapped Antoni to run the Bureau of Labor Statistics, the agency whose data and methodologies he has long criticized, especially when it produces numbers that Trump doesn't like. Antoni recently proposed suspending the monthly jobs report, one of the most important data releases for the economy and markets. On Tuesday, a White House

official noted that Antoni made the comment before he knew he was going to be chosen and that his comments don't reflect official BLS policy.

If confirmed by the Senate, Antoni would run a 141-year-old agency staffed by around 2,000 economists, statisticians and other officials. The BLS has a long record of independence and nonpartisanship that economists and investors say is critical to the credibility of U.S. economic data.

According to a commencement program from Northern Illinois University, Antoni earned a master's and Ph.D. in economics from that school in 2018 and 2020, respectively, and a bachelor of arts from St. Charles Borromeo Seminary. Antoni's LinkedIn profile says he attended Lansdale Catholic High School outside Philadelphia from 2002 to 2006.

According to the profile, Antoni went to work in 2021 as an economist at the Texas Public Policy Foundation, a conservative think tank in Austin that has sued the federal government to overturn climate-change regulations. The following year, he joined the conservative Heritage Foundation as a research fellow studying regional economics. He is now the foundation's chief economist and an adviser to the Committee to Unleash Prosperity, a group of conservative economic commentators. Past BLS commissioners have had extensive research experience, and many have climbed the agency's ranks. Antoni doesn't fit that profile. He doesn't appear to have published any formal academic research since his dissertation, according to queries of National Bureau of Economic Research working papers and Google Scholar. Much of his commentary on the Heritage website praises Trump's policies and economic record. He frequently posts on X and appears on right-wing podcasts such as former Trump adviser Steve Bannon's "War Room," where he criticized the economy under President Joe Biden and lauds Trump's economy.

The Heritage Foundation declined to make Antoni available for an interview and didn't respond to questions about his background.

While Antoni's LinkedIn profile says his Ph.D. concentration was in fiscal policy and labor economics, the dissertation on file at Northern Illinois principally analyzes fiscal policy: the "crowding out" effect of deficit spending, the effect of state taxes on domestic migration, and what he called the irrelevance of credit ratings on municipal debt yields.

According to Google Scholar, Antoni's paper has earned one citation, by the Texas Public Policy Foundation in 2021, while he worked there. Publications by Erika McEntarfer -- the BLS commissioner whom Trump ousted on Aug. 1, midway through her term -- have been cited 1,327 times.

Trump fired McEntarfer after a report showing significant downward revisions to prior months' job growth.

"It's not a matter of making the numbers look good, it's a matter of them being accurate," Antoni said on Bannon's Aug. 1 show after McEntarfer's dismissal. "The models and the methodologies need to be revised."

Antoni told Fox News Digital in an interview on Aug. 4 that "BLS should suspend issuing the monthly job reports" until it changed methodologies. Such a move would be unprecedented, leaving the public and markets without a vital source of information on the economy's health.

His commentary on the data has been partisan. During Biden's final year in office, Antoni argued the consumer-price index was understating inflation. In July 2024, he said its monthly rent data was "stale" and the real costs wouldn't show up until after the election. In fact, while BLS data showed rents rising more slowly than private data in 2021-22, by 2024 the reverse was true: It showed rents up 5.2% that June from a year earlier, compared with 3.2% for Zillow.

On Bannon's Aug. 1 show, he wrongly said that Biden had removed McEntarfer's predecessor, Bill Beach, whom Trump appointed in 2019. In fact, Beach remained in the job until his four-year term expired in 2023, something Beach has said he was "very grateful" for.

Conservatives praised Trump's choice. "EJ Antoni is one of the sharpest economic minds in the nation -- a fearless truth-teller who grasps that sound economics must serve the interests of American families, not globalist elites," Heritage Foundation President Kevin Roberts said in a statement.

But several independent economists said he is unqualified. "There are a lot of competent conservative economists that could do this job," said Kyle Pomerleau, a senior fellow at the right-of-center American Enterprise Institute, in a social-media post. "E.J. is not one of them."

Sen. Bill Cassidy (R., La.), chairman of the Senate Committee on Health, Education, Labor and Pensions said in a statement, "We need a BLS Commissioner committed to producing accurate, unbiased economic information to the American people.

Chairman Cassidy looks forward to meeting with Dr. Antoni to discuss how he will accomplish this."

Move Could Backfire If Data Are Seen as Unreliable

Installing a partisan as the commissioner of the Bureau of Labor Statistics could prove counterproductive to President Trump, said Renaissance Macro Research economist Neil Dutta.

If E.J. Antoni prods the agency into producing statistics that flatter the administration, the data would either not be seen as credible or would likely delay interest-rate cuts by the Federal Reserve.

"Neither of those scenarios actually works to the president's benefit," Dutta said.

Bill Beach, the BLS commissioner appointed during Trump's first term, said Antoni's suggestion of suspending publication of the monthly jobs report would be a bad idea for shoring up trust in the data.

"I think you fix these things while you're also publishing and make that extremely transparent," Beach said. Antoni, he said, "has to be the buffer between the White House and the agency."

Trump, Europe Agree on Ukraine Red Lines --- President tells peers he will aim to clinch cease-fire in talks with Putin on Friday

Pancevski, Bojan . Pancevski, Bojan.

[ProQuest document link](#)

FULL TEXT

BERLIN -- President Trump agreed with European leaders including President Volodymyr Zelensky of Ukraine to red lines for the coming talks with Russian President Vladimir Putin in Alaska and said he hoped to follow up quickly with a trilateral summit with the two warring leaders.

Trump also threatened Putin with "very severe consequences" if the Russian president refused a cease-fire in their coming meeting.

The Wednesday videoconference between Trump and European leaders was very constructive, participants said after the call.

Trump told his European peers that he wouldn't negotiate territorial issues, saying Ukraine must discuss that directly with Russia, Chancellor Friedrich Merz of Germany, who initiated the meeting, said.

The president had made it clear that any security guarantees offered to Ukraine as part of a potential peace deal with Russia wouldn't involve the North Atlantic Treaty Organization, but he accepted that other guarantees would be given

jointly by the U.S. and Europe, said President Emmanuel Macron of France, who attended the meeting. Macron pointed to a potentially significant change in Trump's position on the issue.

"President Trump was very clear that the American desire was to obtain a cease-fire at this meeting in Alaska," Macron said after the meeting.

Two other participants told The Wall Street Journal that Trump signaled that the U.S. would be willing to play a role in future security guarantees together with Europe. They said Trump didn't offer any details.

"We Europeans are doing everything in our power to set the right foundations for this meeting, for we want Donald Trump to have success in Anchorage on Friday," Merz said at a news conference with Zelensky after the meeting. "Fundamental interests of Ukraine and Europe must be secured in Alaska -- this was the message we passed on to the president of the U.S.A."

Trump and his European peers said it was the U.S. president's threat of sanctions that persuaded Putin to seek negotiations, participants said. The Ukrainian delegation was so relieved by the success of the talks that they gave a loud applause after the conference ended, these people said.

Immediately after the meeting, Trump warned of "very severe consequences" if Putin didn't agree to stop the war after the Alaska meeting. But if the Friday meeting with Putin went well, Trump said in a speech at the Kennedy Center in Washington, D.C., he would like to hold a trilateral meeting to kick-start peace talks.

"I would like to do it almost immediately, and we'll have a quick second meeting between President Putin and President Zelensky and myself, if they would like to have me there," Trump, a Republican, said.

Shortly before the meeting was set to begin on Wednesday morning in Washington, the Russian government reiterated that its conditions for ending the war remain unchanged. Among them is a demand that Ukraine withdraw from territories that Russia hasn't conquered. The statement appeared to roll back an earlier offer Putin made to Trump's special envoy, Steve Witkoff, who told European officials last week that Moscow might agree to freeze the front line in southern Ukraine in exchange for Kyiv ceding territory in the east.

The conference was called to forge a common U.S.-European position ahead of what officials describe as the most significant negotiation between the West and Russia since the full-scale invasion of Ukraine in February 2022. Vice President JD Vance, Witkoff and Trump's Ukraine envoy, Keith Kellogg, joined Trump in talks with the leaders of Germany, France, Britain, Italy, Poland, Finland, the European Union and NATO.

Merz convened the meeting amid concerns that Trump and Putin -- a Soviet-trained former intelligence officer -- could strike a deal that would be harmful to Ukrainian and European interests, senior German and EU officials said.

Merz said Zelensky demonstrated in the meeting that Ukraine is ready to discuss territory, but Zelensky also said the starting point for any negotiations must be the current battle line.

Zelensky, who traveled to Berlin to attend the conference with Merz, said the meeting showed how all leaders were on the same page regarding the talks with Russia.

"Anything to do with Ukraine can only be negotiated with Ukraine," Zelensky said.

NATO Secretary-General Mark Rutte, who also attended the virtual meeting, said it was great and showed that everyone was united in pushing to end the war.

"The ball is now in Putin's court," Rutte posted on X. In the meeting, Rutte told Trump Putin's proposal to Witkoff -- for Ukraine to give up fortified areas in the Donetsk region in exchange for a cease-fire -- would mean opening a "highway" for the Russian army to advance to Kyiv, two participants said.

While Trump's decision last week to meet Putin on U.S. soil worried Europeans, trans-Atlantic relations have since warmed. "They are great people who want to see a deal done," Trump wrote, referring to his European partners, on Truth Social on Wednesday.

European leaders and Zelensky had presented Trump with five succinct red lines to carry into the Alaska summit: a cease-fire as a prerequisite for further talks; any territorial discussions to start from the current front lines; binding Western security guarantees that Russia must accept; Ukraine's participation in the talks; and support from the U.S. and Europe, including Ukraine, for any deal.

They relayed to Trump that there would be no legal recognition of occupied territories by Ukraine or Europe, but that a

recognition of the situation on the ground could be part of a future deal, several participants said.

World News: Vance Family Visit Riles Locals in English Countryside

Shahidi, Roya . Shahidi, Roya.

[ProQuest document link](#)

FULL TEXT

CHARLBURY, England -- People in this bucolic corner of England were already a bit testy about hordes of visiting Americans in recent years.

Then the most high-profile one so far arrived for a family trip: Vice President JD Vance.

For the past few days, residents of the Cotswolds have been subjected to the traveling circus that accompanies a senior visitor from the White House. Long convoys of giant SUVs with tinted windows guarded by a police escort wend past tiny roads and quaint houses. Helicopters hover overhead. Men with earpieces stand near entrances to walking paths where locals normally wander next to fields.

Roads near the hamlet of Dean, where the Vance family has been staying at an 18th-century manor, have been closed and only residents are allowed through. Some have complained that police or the U.S. Secret Service have knocked on their doors to verify their identity and even ask about their social-media profiles, according to local officials.

"We've had a curtailment of our freedoms here," said Steve Akers, the deputy mayor of Chipping Norton, near Dean.

Asked about officials requesting social-media profiles, Vance spokesman Will Martin said: "The Vice President's Office and Secret Service were unaware of any efforts by local police to collect residents' social-media information."

Some residents were flattered that Vance picked the Cotswolds. "I think it's a really good thing. The vice president of the most powerful country in the world has come so locally, in a place like this," said John Kinchella, a 27-year-old.

Others were less pleased. A few dozen held a Vance "not welcome party" on Tuesday, holding placards that denounced his views on Russia's war in Ukraine, his support of Israel in the Gaza war, or his outspoken takes on Europe. In keeping with the party theme, there was a cake decorated with the "Bald Vance" meme, depicting the vice president as a bald, bearded baby man.

Sue Moon, who lives in Chipping Norton, held up a sign that says "Cotswolds Childless Cat Ladies Say Go Home," a reference to Vance's comments in 2021 that Democrats were run by a "bunch of childless cat ladies with miserable lives."

"I don't know anybody who feels positively about it," Moon said about the visit.

Some locals haven't forgiven Vance's confrontation with Ukrainian President Volodymyr Zelensky at the White House.

Support for Ukraine runs high in the U.K. On Tuesday, a Ukrainian flag flew yards from where a European Union flag was

displayed on a building in Charlbury.

"We feel very strongly that our grandparents fought against fascism. They gave everything for the fight. And now, 80 years later, Vance and Trump are asking us -- asking Europe, Ukraine, in particular -- to just roll over and accept Putin's fascism," said Natasha Phillips.

Others remembered Vance's comments suggesting the U.K., which supported the U.S. in Iraq and Afghanistan, hadn't fought a war in decades. "For him to disrespect our country and then come here on holiday and loving it -- it's just like you're contradicting yourself," said Fred Butler-McLees, an 18-year-old. "It's not right."

Dean Manor, where the Vances have been staying before heading off to Scotland later this week, is owned by British millionaires Johnny and Pippa Hornby and has 6 acres of gardens. It garnered the "best swimming pool" of the 2023 Country House Awards from Tatler society magazine.

The Cotswolds, with rolling hills and picture-perfect villages, has become a popular spot for Americans to visit or live. But some locals complain U.S. dollars, while good for business, are driving up housing prices, and causing congestion with outsize SUVs.

"Suddenly people with a lot of money think it's very twee and very English. It's absolutely ridiculous. Look at all these big cars. They're spoiling it for us -- for the people who live here and who have their lives here," lamented an older resident.

A reporter for the Oxford Mail posted a video online of the vice presidential motorcade of 22 cars rumbling by. "Bloody hell," a voice says as the cars keep coming.

U.S. News: Alaska Capital Curbs Damage From Flooding --- Juneau officials say barriers helped keep glacial outburst from causing catastrophe

De Avila, Joseph . De Avila, Joseph.

[ProQuest document link](#)

FULL TEXT

Floodwaters from a glacial outburst poured through Juneau, Alaska, on Wednesday, but the state's capital seemed to have dodged catastrophic flooding that many officials feared.

The Suicide Basin, adjacent to the Mendenhall Glacier above Juneau, had been gushing water into the Mendenhall Lake and Mendenhall River since Tuesday. The National Weather Service said the Mendenhall Lake crested Wednesday morning. By midafternoon in Juneau, waters had receded and the flood threat had ended, local officials said.

Katie Koester, city manager of Juneau, credited flood barriers with preventing more damage.

"If it weren't for them, we would have hundreds and hundreds of flooded homes that we would all be planning to deal with," Koester said at a news conference, referring to the flood barriers.

Local officials said they expect some homes will have flood damage, and will do individual assessments of homes and businesses.

Suicide Basin produced a glacial outburst that created a record flood in August 2024, causing flooding that damaged homes, public infrastructure and utilities.

"We are a far cry from where we were last year," said Roald Helgesen, chief operating officer of the Tlingit and Haida Indian

Tribes of Alaska based in Juneau.

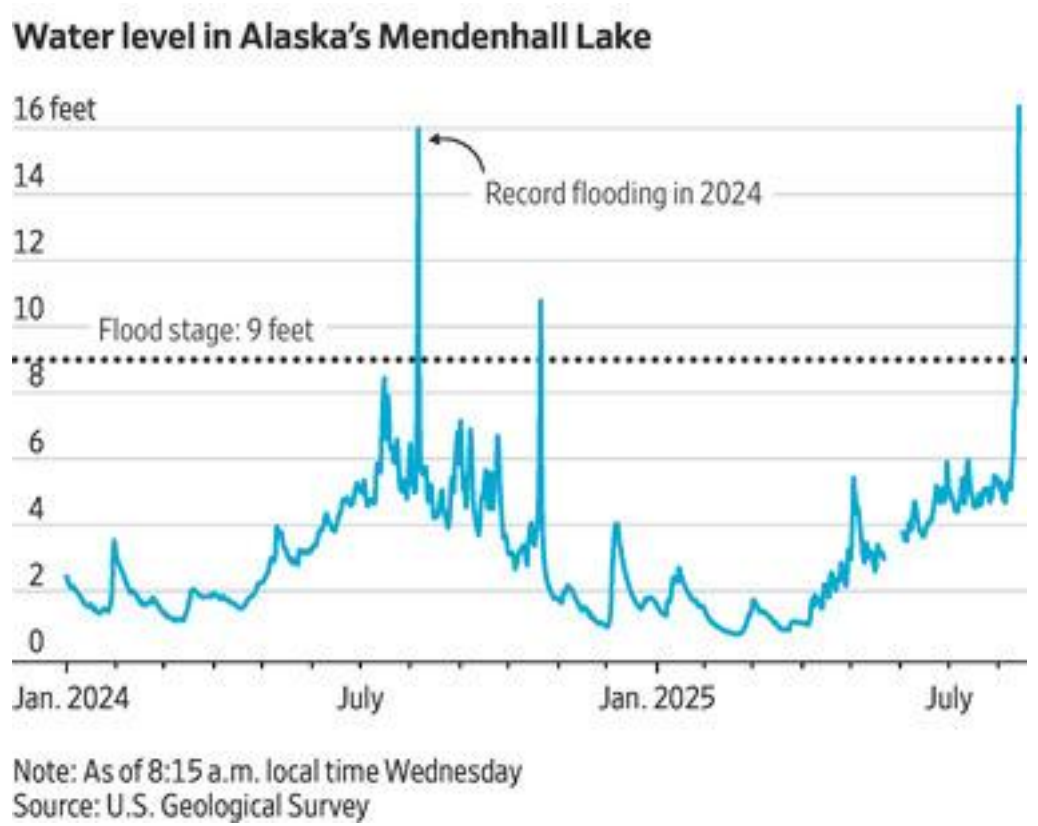

Alaska Gov. Mike Dunleavy issued a disaster declaration in advance to streamline emergency response efforts. Juneau's schools will be closed on Thursday and will open Friday for the first day of school.

Rainwater, ice and glacier meltwater accumulate in Suicide Basin. When the water reaches a certain level, it drains into the Mendenhall Lake in a glacial outburst flood. When the lake overflows, the water can flood roads and homes as it heads down the Mendenhall River and eventually to the Pacific Ocean.

Suicide Basin has released outbursts of glacial waters into the Mendenhall River and Mendenhall Lake since 2011, the weather service said.

The Mendenhall Glacier, one of the biggest tourist attractions in the region, is part of the Juneau Ice Field, a mass of interconnected glaciers that straddles the boundaries of Alaska and British Columbia, Canada.

The Juneau Ice Field is melting twice as fast as it did prior to 2010 because of a warming climate, researchers from Newcastle University found.

Business News: Apparel Company Gildan Sets \$2.2 Billion Hanesbrands Deal

Marchese, Adriano; Hart, Connor . Marchese, Adriano; Hart, Connor.

[ProQuest document link](#)

FULL TEXT

Gildan Activewear is buying Hanesbrands for \$2.2 billion, combining two makers of basic apparel with the aim of selling more T-shirts, socks and underwear across the retail landscape.

Gildan Chief Executive Glenn Chamandy said the deal creates a company that can approach retailers with more heft and accelerate sales in the strong parts of the business. For Gildan, that includes activewear products, such as T-shirts and fleece sweatshirts, while for Hanesbrands it includes undershirts and underwear.

"From a diversification perspective, it brings us a good complement strategically and it allows us to get scale to be a large apparel supplier in the industry," Chamandy said Wednesday.

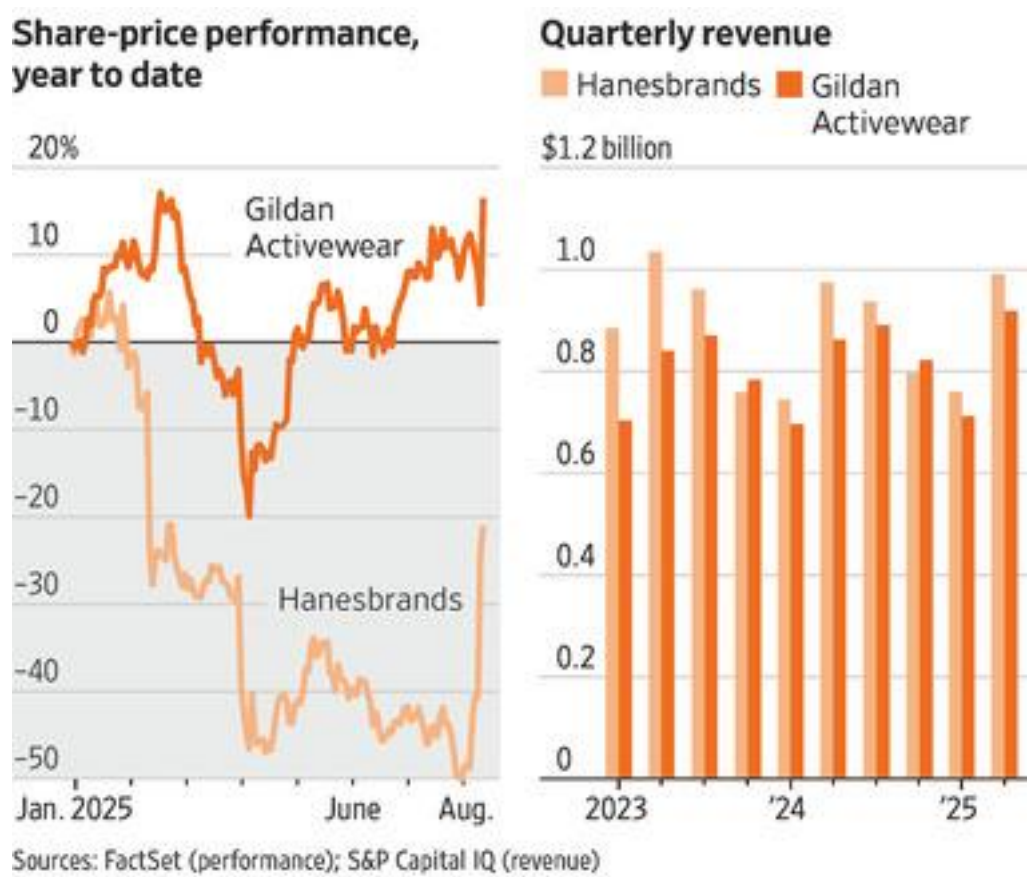

The deal values Hanesbrands at about \$4.4 billion, including debt, the companies said. The combined company will double Gildan's annual revenue and will also combine Gildan's low-cost manufacturing capabilities with Hanesbrands' stronger name recognition and broader retail presence, Chamandy said.

The deal lands as the apparel industry is contending with rising costs born of trade tension sparked by President Trump's tariffs.

Chamandy said both Gildan and Hanesbrands have reduced exposure to tariffs as they mostly use U.S.-grown cotton.

Hanesbrands shares rose 3.71% to \$6.41, while Gildan stock was up 11.8% to \$54.93.

Gildan said the acquisition will immediately add to its adjusted per-share earnings and that the deal is expected to result in at least \$200 million of annual run-rate cost synergies within three years of closing.

World News: Tariffs Stymie Production in India --- Companies that shifted from China are feeling pinch of Trump's heavy levies

Emont, Jon . Emont, Jon.

[ProQuest document link](#)

FULL TEXT

Since President Trump's first term, companies grappling for trade certainty have clung to one guiding principle: Move production out of China. But months into the president's global tariff barrage, that doesn't always apply.

Take India.

Companies looking to diversify their supply chains saw India's vast population, its strengthening ties with Washington, and its abundance of engineers and scientists as a good hedge against China.

But then Trump -- who has been trying to pressure President Vladimir Putin into ending Russia's war on Ukraine -- grew angry with India over the country's purchases of Russian oil. In recent weeks, Trump has slapped a 25% tariff on Indian imports and has threatened to double that by the end of this month. In that case, tariffs on India would match the roughly 50% duties the U.S. now charges on Chinese goods.

That has left companies that have moved production to India scrambling to respond.

"All the effort that we put up over the last four to five months is suddenly up in the air," said Rohin Malhotra, the chief technology officer of Posha, a Silicon Valley-based maker of countertop cooking robots that had been working to shift production to India from China.

The company, whose robots are programmed to cook meals with prepped ingredients, has put those plans on hold as it waits to see if the 50% tariff sticks.

"It's just wasted effort to think of an alternative destination for now," he said.

India has worked hard in recent years to attract businesses that decided to diversify away from China -- a strategy dubbed "China Plus One." Indian authorities have worked to ease the thicket of regulations and modernize the country's infrastructure, both of which have hindered business investment in the past.

The push has, in some cases, paid off handsomely, bringing in much-needed investment. For instance, Apple began shifting a large chunk of its iPhone production to India from China about a decade ago.

India produced about 14% of Apple's iPhones in 2024, according to technology research firm TechInsights, up from zero nine years earlier. (The Trump administration has exempted iPhones from most tariffs.)

But now, uncertainty over U.S. trade policy reigns.

Some hope Trump will lower the India tariffs after he meets with Putin this week. At the same time, the U.S. and China are still in talks to determine the final level of tariffs.

Other countries that have lured businesses away from China, like Vietnam and Malaysia, have been assigned tariff rates of around 20%. It is uncertain whether those tariffs are low enough for companies to justify the disruption of moving supply chains from China.

Moreover, Trump intends to charge higher levies on so-called trans-shipped products, or those assembled in third countries with some Chinese components. However, the exact mechanism of such tariffs is unclear.

"Instead of a smooth 'China+1' diversification, many are now in 'China+None of the Above' mode," unsatisfied with any of their options, wrote Mark Morgan, president of global commercial operations at Kinaxis, a supply-chain company.

Liz Andarcia, co-founder of Rise Collective Consultants, a supply-chain consulting firm that has helped retailers shift production out of China, said some companies are hoping to wait a couple of weeks before making big moves.

Still, she is working with one client, whose production is heavily concentrated in India, to shift some sites to Pakistan and Turkey.

"We're just fast-tracking those now, like pedal to the metal," she said.

It's a difficult period for Serenial Technology, an Indian company setting up a contract manufacturing site in Dharwad, India. Renaud Anjoran, a co-owner, said U.S. clients who were eager to have their electronics products made in Dharwad are indicating they will wait to see what happens with tariff rates before committing.

"It just threw a huge wrench in our plans basically," he said. Many of his clients will stick with China, he said.

All the tariff uncertainty has whipsawed Radhika Patil, the CEO and cofounder of Cradlewise, a Silicon Valley-based maker of cradles that soothe babies back to sleep.

Cradlewise began commercial sales five years ago, but it has moved manufacturing twice, first to Vietnam from China, and last year to India from Vietnam.

The company set up manufacturing in Pune, an industrial hub in western India that has traditionally produced cars.

Patil said she was drawn to India because it is a strong base for raw materials, so she wouldn't be reliant on imported parts.

"We just wanted to build more predictability into the supply chain," she said.

Instead, the tariffs are now forcing her to consider raising U.S. retail prices for her cribs by around \$200, a step she has previously avoided out of fear of spooking customers.

Moving production to the U.S. would be tricky, she said. Besides higher labor costs, the company would also have to contend with tariffs on imported components.

Patil said it has been a stressful time. "This was a sudden shift," she said. "Fifty percent -- and overnight -- is very difficult to absorb."

U.S. News: Silicon Valley Drifts Away From Democrats --- Party bleeds support from tech officials, spurring activists to try to mend fences

Ramkumar, Amrith; Collins, Eliza . Ramkumar, Amrith; Collins, Eliza.

[ProQuest document link](#)

FULL TEXT

Last year's election delivered the biggest blow in decades for the marriage between Democrats and Silicon Valley. Repairing the damage is proving difficult.

Adam Kovacevich, the chief executive of the center-left trade group Chamber of Progress, is trying to play marriage counselor. Kovacevich has spent months talking to Democrats, tech workers and former Biden administration officials about what pushed tech executives away from the party and how to mend the relationship.

Some executives who reliably give to Democrats feel that party leaders view Silicon Valley as a piggy bank and aren't promoting policies that help the industry. The trend is fueling concerns among Democrats that bleeding support among tech elites like OpenAI's Sam Altman and venture capitalist Marc Andreessen is another obstacle for a party facing its lowest poll numbers in more than three decades.

"I think it's a big problem," Kovacevich, a former Google executive, said. "It would be an own goal for us to become the anti-innovation party."

About 80% of donations from the communications and electronics sector in the last election cycle went to Democrats, with a similar ratio at big tech companies like Google and Microsoft, according to OpenSecrets, a nonprofit that tracks data on campaign finance. But the alliance soured for some who opposed the Biden administration's focus on regulating areas like cryptocurrencies and artificial intelligence and are encouraged by President Trump's policies.

"The Democrats were the party of innovation and all things new and cutting edge. We definitely took a back seat," said Brian Brokaw, a Democratic adviser to California Gov. Gavin Newsom and others.

Brokaw, who also has tech clients, warned that his party needs to convince the industry that they are pro-innovation or risk losing a financial lifeline. "If you don't have the support financially from what was, in recent cycles, a key component of your fundraising base, that is going to put the Democrats at an electoral disadvantage."

Rank-and-file tech workers are mostly expected to continue backing Democrats, but the shift among some key executives is another development worrying party leaders.

Altman recently said he was "politically homeless" after what he said was a Democratic shift away from policies that support innovation and entrepreneurship. Altman once compared Trump to Hitler, but he is now among Trump's favorite executives, embracing the president's policies of cutting red tape and supporting AI.

Kovacevich's listening tour is one of several steps Democrats are taking to address the challenge. Earlier this year, House Minority Leader Hakeem Jeffries (D., N.Y.) and Silicon Valley Rep. Sam Liccardo met with donors about repairing the relationship.

Liccardo, a former mayor of San Jose, said Democrats can win back support from smaller tech companies that don't like Trump's tariffs, attacks on immigrants and funding cuts at universities. Liccardo recently helped publish an innovation agenda for a group of House Democrats that gave priority to research funding and high-skilled immigration.

"This is an opportunity for the Democrats to distinguish ourselves if we're willing to embrace the imperative of supporting innovation," he said.

Cooper Teboe, a Silicon Valley based Democratic adviser, estimates Democrats hemorrhaged support from 30% to 40% of the tech industry during the 2024 election but has earned some back. One challenge is that many tech entrepreneurs are benefiting from Trump's policies of tax cuts and deregulation.

"These guys just want to build things and make money and so does Trump," said Teboe.

He said Democrats can win back support they lost -- especially if they focus on tariffs and economic uncertainty -- but most of the party needs to change its strategy. He is working with Liccardo and Rep. Ro Khanna, who also represents a big chunk of Silicon Valley and has good relationships with the industry. Both Khanna and Liccardo are some of the House's top fundraisers.

Many tech executives or their companies donated \$1 million to Trump's inaugural fund. Several of the major inauguration donors flanked Trump when he was sworn into office for a second time.

"Some of the same people who were standing up there at Trump's inauguration were talking to people like me in 2017-2018," said Aaron Goldzimer, a Democratic donor adviser.

Trump has embraced cryptocurrencies, putting Democrats in Congress in a bind because opposing legislation creating the industry's first regulations could be seen as fighting an innovative technology but supporting it could benefit Trump through his family's ventures. His family has already made at least several hundred million dollars from various crypto ventures. The White House has said there is no conflict of interest.

"I've never seen people more willing to support Republicans and even Trump than right now in Silicon Valley," said Matt Lira, a Republican who worked on tech issues in the first Trump administration.

FULL TEXT

WASHINGTON -- President Trump's apocalyptic portrait this week of the nation's capital -- a city awash in "bloodshed, bedlam and squalor and worse" -- aired one of his longest-running grievances and political tools. The familiar riff has been honed over years by Trump, who pledged to "drain the swamp" in his first presidential campaign and made promises to address D.C. crime a centerpiece of his second. Now the heavily Democratic capital has become both a potent symbol and a test case for using federal troops for domestic law enforcement in other cities. The effort isn't born from Trump's personal experiences in Washington. He rarely leaves the White House to see the city; most of his drives through the capital are to Trump National golf course in Sterling, Va. The graffiti he sees from his motorcade irks him, however, and he has expressed outrage at stories of administration officials and congressional aides who have been local violent-crime victims. Trump brought up graffiti at his first meeting with Washington Mayor Muriel Bowser since being elected. On Monday, he made his most aggressive foray into the city's civic life, announcing he would take command of the district's police force and use more federal resources to address crime. The National Guard officially deployed into the city Tuesday, according to a Defense Department official, and small numbers of unarmed troops were seen patrolling near landmarks, including the National Mall. Trump's political support among the district's residents is paltry, but because of how the city is organized, he has the power to exert control over it. Republicans successfully campaigned in recent years on lowering crime, which increased nationwide during the Covid-19 pandemic. With control of Congress, they blocked changes to the district's criminal code over concerns about softened penalties for lawbreakers; many Democrats, accused of being weak on crime, also supported the measure. Bowser, a Democrat, has said that the city's crime statistics show that while crime surged in 2023, it is now below prepandemic levels. To curb crime by juveniles, who are harder to prosecute, Bowser pushed through emergency legislation this year that put in place a curfew for kids 17 and under through Aug. 31. In certain parts of Washington, it started at 7 p.m. Under the Home Rule Act, Trump can take over the city's police department for 30 days. To extend that period, he will need approval from Congress, at a 60-vote threshold in the Senate. Republicans narrowly control the Senate 53-47. In Trump's first term, he spent many evenings at his Trump Hotel, a few blocks from the White House, now a Waldorf Astoria. Trump stayed away from interfering with the city's operations until protests in 2020 led to the deployment of the National Guard and federal enforcement agencies. Bowser fought Trump in his first term but initially tried to appease him this time around. Shortly after Trump took office, the mayor ordered the removal of Black Lives Matter plaza, a two-block-long mural in downtown Washington erected in the summer of 2020. Washington has removed references to being a "sanctuary city" on its website. She also tempered her language on Trump; she said Monday that increased law enforcement in the city might be a "positive development." But the hazards for the district became clear in March, when the Republican-controlled House passed a bill to fund the federal government. The bill omitted language that would have protected the district from a \$1.1 billion cut in the middle of the fiscal year, tearing a hole in the city's previously balanced budget.

The Senate, also led by the Republicans, promptly passed a bipartisan legislative fix, but months later the House hasn't followed suit. The city in response implemented a hiring freeze, paused contracts and warned that if cuts continued, they would have drastic impacts to the city's schools and law enforcement.

Sen. Tim Kaine (D., Va.) said Trump was trying to divert attention from recent inflation and jobs numbers. Kaine said he and other Democrats would likely block attempts to extend Trump's control of the police but added they are concerned that the president's efforts on Washington could serve as a pilot program for using the troops and emergency powers to intervene in other cities.

"All of this is the attempt to look strong when your agenda is flailing and foundering and so, yeah, he might try it again when the conditions in his own polling and politics continue to worsen," said Kaine.

World News: Bank of Thailand Resumes Rate Cuts

Lee, Amanda . Lee, Amanda.

[ProQuest document link](#)

FULL TEXT

Thailand's central bank resumed cutting rates to help an economy beset by domestic instability and tariff headwinds. The Bank of Thailand's monetary policy committee on Wednesday voted unanimously to cut its policy rate to 1.5% from 1.75%. The committee said monetary policy should be accommodative going forward to boost the economy.

"At the same time, it is important to ensure macro-financial stability, while taking into account the limited policy space," the BOT said.

Six of 10 economists polled by The Wall Street Journal had expected a quarter-point rate cut as inflation stays low and the bank sticks to a stance of accommodative monetary policy.

The Thai economy is projected to grow in line with its previous assessment, the central bank said.

The BOT in June forecast the economy to expand by 2.3% and 1.7% in 2025 and 2026, respectively. The projections are based on the assumption then that the U.S. applies a tariff of 18% to Thailand, and 10% on other countries. Thailand has been hit with a 19% tariff on its exports to the U.S.

U.S. trade policy could exacerbate structural problems and weaken competitiveness for Thailand, the central bank said.

"Going forward, the economy is expected to slow down in the second half of the year due to U.S. trade policies, both directly and indirectly, and a decline in short-haul tourist arrivals as a result of intensified regional competition," the central bank said.

The BOT said on Wednesday that it expects headline inflation to remain subdued. Raw-food prices have fallen because of favorable weather conditions, boosting supply. Energy prices are also trending downward, in line with global crude oil prices.

Wednesday's decision is the last under BOT Gov. Sethaput Suthiwartnarueput, which some observers thought would lead to a wait-and-see approach ahead of the leadership transition. Vitai Ratanakorn will succeed Suthiwartnarueput starting Oct. 1.

Moving forward, the BOT is expected to shift its policy focus from bringing down debt to supporting growth, HSBC economist Aris Dacanay said in a recent report.

"This shift will likely be led by the new and incoming BOT Governor, Vitai Ratanakorn, who has been transparent with his dovish bias over monetary policy," Dacanay wrote.

The Thai central bank's decision and its dovish commentary cements Capital Economics' view that further easing is likely in the coming months. Weak growth remains the main reason for expecting more easing, senior Asia economist Gareth Leather said in a note.

U.S. News: New York Attorney General Sues Zelle Owner

Tokar, Dylan . Tokar, Dylan.

[ProQuest document link](#)

FULL TEXT

New York Attorney General Letitia James is suing the owner of Zelle for allegedly failing to protect its users from fraud, reviving claims the Trump administration had abandoned as part of its moves to gut a federal watchdog for consumers. The Consumer Financial Protection Bureau filed a similar lawsuit against the payments platform and three of its bank owners at the end of the Biden administration. That lawsuit and other actions by the bureau have been rolled back since Trump officials took control of the agency.

Some Democratic states have indicated that they intend to fill the void left by the CFPB, which was created after the 2008 financial crisis to respond to consumer complaints about banks, mortgage companies and payday lenders.

James has positioned herself as one of President Trump's most high-profile political foes and is among the Democratic attorneys general strategizing on how to thwart his policies. She and other state attorneys general earlier this year sued the Trump administration to halt its downsizing of the agency.

The Trump administration has launched its own legal campaign against James. The Justice Department recently opened an investigation into whether the New York attorney general violated Trump's rights by bringing a civil lawsuit against him and his business.

The lawsuit filed by James's office Wednesday said Zelle-owner Early Warning Services failed to include critical safety features when it launched the payments platform in 2017, allowing scammers to steal more than \$1 billion from users. The company, which is owned by a consortium of banks including JPMorgan Chase, Bank of America and Wells Fargo, knew about design flaws that allowed scams to proliferate but pushed ahead anyway, the suit said. It said the banks rushed Zelle's rollout to compete with a new wave of instant-payment apps like Venmo and Cash App.

An Early Warning Services spokesman blasted the lawsuit, calling it a "political stunt."

"This is nothing more than a copycat of the Consumer Financial Protection Bureau lawsuit that was dismissed in March," the spokesman said.

James said she was seeking restitution and damages for affected New Yorkers, as well as a court order requiring Early Warning Services maintain antiscam safeguards.

The CFPB's actions during the Biden administration sparked a backlash from Republicans and the banking industry, which argued that the bureau was repeatedly overstepping its authority in its policing of financial products.

Trump officials have moved to slash about 90% of the CFPB's staff, but the layoffs are on hold while an appeals court in Washington, D.C., hears arguments by the union that represents the agency's staff.

U.S. News: Tesla Takes Steps to Bring Robotaxis to New York City

Peterson, Becky . Peterson, Becky.

[ProQuest document link](#)

FULL TEXT

Tesla is taking early steps to bring its robotaxis to New York just weeks after competitor Waymo announced its own plans to test autonomous vehicles in the city.

In a recent job posting, Tesla said it is hiring data collectors to drive vehicles around the country's most populous city. The job location is listed as Flushing in the borough of Queens. The company said it was looking for "a highly motivated self-starter" who would work as a "prototype vehicle operator."

Those drivers will collect the audio and video needed to test and train software for the company's Autopilot team, which makes the technology behind its self-driving vehicle, as well as a less-advanced version available in personal vehicles known as Full Self-Driving (Supervised). The job pays up to \$30.60 an hour, and a driver's license is required.

It will likely be a long time before Tesla brings its new Robotaxi app to New York. The company hasn't applied to test autonomous vehicles in the city, according to a spokesman for the city Transportation Department.

While New York City opened a permitting process for autonomous-vehicle operators last year, companies that get permits are required to have a safety driver behind the wheel to take over.

Waymo, which announced its interest in the market in June, said it had applied for that permit and is vying to be the first company to start testing. Meanwhile, it is collecting driving data in the city.

Tesla is hiring for similar data-collection roles in California, Texas and Florida as it works to expand the robotaxi ride-hailing service launched in Austin, Texas, in June. In a post on X, Tesla Chief Executive Elon Musk said the Austin service, which is now invite-only, will open to the general public in September.

The company also started an invite-only ride-hailing app in the Bay Area in July, though that service uses human drivers because the company isn't yet licensed to operate autonomous vehicles.

"I think we'll probably have autonomous ride-hailing in probably half of the population of the U.S. by the end of the year," Musk told investors last month.

Tesla still hasn't applied for a permit to test or operate robotaxis in California, according to a spokesman with the state Department of Motor Vehicles. Tesla has met with regulators in California and in neighboring Nevada. In Arizona, Tesla has applied to test and operate robotaxis in the Phoenix area.

Document 16 of 22

U.S. News: Squalid Conditions Alleged At Alligator Alcatraz Site

FULL TEXT

The Trump administration is facing increasing pressure over the conditions at immigration detention centers, including at the newly constructed Florida facility known as Alligator Alcatraz.

In a legal filing Wednesday, detainees at Alligator Alcatraz and their lawyers allege the tent camp on an airstrip in the Everglades has become a squalid place with limited access to the outside world. The allegations come on the heels of another decision this week by a federal judge ordering Immigration and Customs Enforcement to improve conditions at a holding center in Manhattan where lawyers said migrants were subject to unsafe and unsanitary conditions.

At Alligator Alcatraz, detainees report the unchecked spread of illness, flooding and a lack of food and of a place to bathe or clean their teeth, according to the lawsuit.

Detention officials go "cell to cell" pressuring detainees to sign documents agreeing to drop their immigration cases and leave the country voluntarily. At least one man was coerced to sign such a document in exchange for a blanket, the lawsuit alleges.

Unlike at other immigration detention facilities, lawyers say they can't see their clients' locations on regular ICE databases to confirm they are being held at Alligator Alcatraz. Lawyers say they have struggled to access their clients in person to exchange legal documents, meaning they sometimes miss key deadlines, the lawsuit says.

In the new filing, detainees are asking the court to allow meaningful access to lawyers and to identify the court where they can challenge detentions at Alligator Alcatraz.

Department of Homeland Security spokeswoman Tricia McLaughlin said the facility is clean, meets federal detention standards and has a physical space for detainees to visit with their attorneys. Any allegations of inhumane conditions are false, she said.

The facility opened earlier this summer, and the administration has acknowledged in court filings it had initial "growing pains." Visiting the facility earlier this summer, President Trump toured a tented structure that had high chain-link fences surrounding bunk beds. The center was air-conditioned and designed to withstand heavy winds. It was also fitted with indoor and outdoor recreation yards and a medical facility.

As part of the Trump administration's crackdown on illegal immigration, officials have ramped up arrests and limited the eligibility for immigrants to be released from detention on bond as they fight their deportation cases.

A different Florida judge this month ordered a temporary pause to expanding the facility while she considers a lawsuit alleging that the federal government failed to conduct a required environmental review before the facility opened.

The administration is also facing scrutiny over detention conditions at 26 Federal Plaza in New York, a federal building that has a holding center designed to briefly keep migrants before they are transferred to a long-term detention facility. In a lawsuit this month, lawyers said migrants are being held there for days in crowded rooms without beds, sufficient food, hygiene products or access to showers. Detainees weren't given necessary medication and didn't have confidential access to attorneys, the suit said.

The suit said detainees slept on the floor next to open toilets and weren't given clean clothes. In one instance, the suit said, a woman who was menstruating wasn't given proper hygiene products and had to remain in blood-soaked clothes throughout her detention.

In a temporary restraining order issued on Tuesday, Judge Lewis A. Kaplan told the agency to ensure that each person detained there has at least 50 square feet of space and is provided hygiene products and a clean mat to sleep on, among other conditions. Kaplan also mandated that detainees have regular confidential access to their attorneys.

McLaughlin of DHS said the lawsuit was driven by "complete fiction" about the goings on at the New York holding center. She described it as a brief intake center for migrants before they are transferred to a detention center.

WASHINGTON

Trump Taking Stage

At Kennedy Center

President Trump said he would host the Kennedy Center Honors, the awards show honoring lifetime achievement in the

performing arts. This year's recipients include country singer George Strait, disco star Gloria Gaynor and rock band KISS, among others.

Trump's decision to host comes as he has sought to exert control over the John F. Kennedy Center, one of the U.S.'s premier cultural institutions. Earlier this year, Trump fired Kennedy Center board members, criticized the center's programming and installed himself as chair.

The president said he became chairman because he always wanted to be a Kennedy Center honoree. "I waited and waited and waited, and I said, 'To hell with it, I'll become chairman. I will give myself an honor,'" he said.

-- Alyssa Lukpat

CALIFORNIA

Judge Orders U.S.
To Restore Grants

A federal judge has ordered the Trump administration to restore millions of dollars in National Science Foundation grants it has withheld from the University of California, Los Angeles.

U.S. District Judge Rita F. Lin late Tuesday ruled the NSF must reinstate the research grants that were suspended for reasons she had already ruled were "arbitrary and capricious," and gave the administration until Aug. 19 to show compliance or explain why it hasn't restored the money.

It wasn't immediately clear how much funding could be returned to UCLA.

The school's chancellor said last week that the administration has pulled \$584 million in federal grants from various federal agencies. The judge's ruling applies specifically to NSF grants.

U.S. News: Key U.S. Gateway Set Imports Record in July

Berger, Paul . Berger, Paul.

[ProQuest document link](#)

FULL TEXT

America's busiest gateway for imports from China set a new record in July, handling the equivalent of more than one million import containers for the first time.

The ports of Los Angeles and Long Beach last month processed 1,011,809 of the containers, measured in 20-foot equivalent units. That surpasses the prior record of 980,450 import boxes, set in May of 2021 during the Covid pandemic, according to LSEG data.

July was a bumper month for seaports across the country as retailers and manufacturers rushed in goods ahead of August deadlines when tariffs on a host of U.S. trading partners, including China, were set to rise. Data from logistics software provider Descartes show U.S. imports from China rose 44% in July from June.

President Trump earlier this week extended the deadline for higher tariffs on China until Nov. 9.

Walmart Perk to Ease Workers' Grocery Bills

Nassauer, Sarah . Nassauer, Sarah.

[ProQuest document link](#)

FULL TEXT

Walmart's newest employee benefit takes aim at a growing cost for many of its workers: their grocery bills.

The country's largest private employer said that, effective immediately, it was extending its 10% employee discount to include nearly all grocery purchases at its stores and online -- its latest effort to better recruit and retain workers.

The discount has long applied to fresh produce and general merchandise but excluded groceries such as milk, pasta, frozen pizza or meat, except during the November and December holiday-shopping season. Walmart workers have grumbled about the perk's limitations for years.

Walmart U.S. Chief Executive John Furner and a Miami-area store manager announced the news Wednesday on stage at a Houston gathering of store managers, prompting a standing ovation.

"All I can think is about my associates back home," the manager said, according to video viewed by The Wall Street Journal.

"The associate pantry means everything to them because they don't know how they are going to be paying their next meal, and now this is going to help," he said, referencing informal backroom snacks in many stores.

Extending the discount to more goods year-round is "one of our most requested benefits," said Walmart Chief People Officer Donna Morris in a letter to staff Wednesday. Walmart's roughly 1.6 million U.S. workers receive the benefit after 90 days of employment. It excludes clearance items.

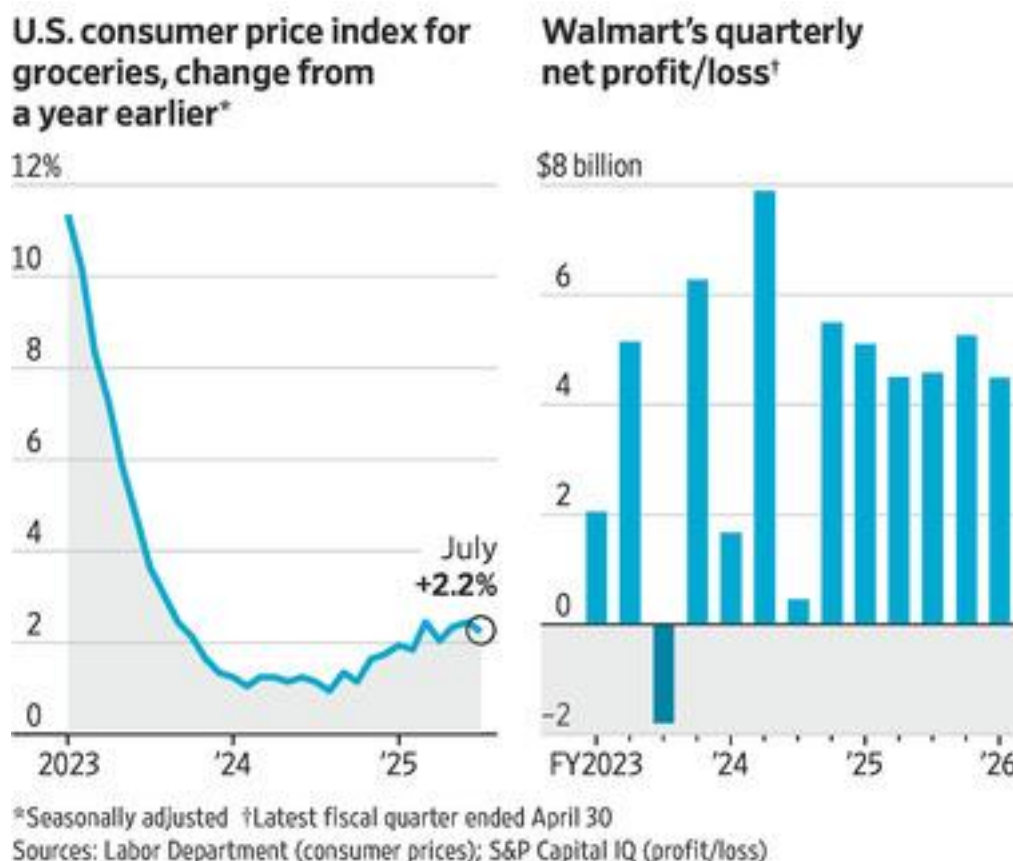

The change brings Walmart more in line with some competitors such as Target and Whole Foods. Whole Foods, owned by Amazon.com, offers workers a 20% discount on most in-store purchases from the first day of employment. Target offers a 20% discount on fresh and frozen produce and some store brand items and a 10% discount on most other goods, which can be combined and are available on the first day of employment. Amazon provides a more limited perk to its U.S. warehouse and other hourly workers of a 10% discount, up to \$100 saved each year.

Though the latest government data show that overall food prices held steady last month, they have risen sharply year over year for staples such as eggs, coffee and beef, according to the July consumer-price index report released this week. That adds to several years of persistent inflation.

Walmart's new perk is part of a string of additional benefits it has introduced in recent years, like higher wages for store managers and new potential bonuses for hourly workers. The move suggests the Bentonville, Ark.-based retailer continues to compete for hourly store workers as well as for business from inflation-weary shoppers. Morris said the discount aims to help "continue to make Walmart a great place to work."

Walmart declined to comment on what the estimated cost of expanding the benefit would be.

Walmart has been a retail winner, reporting years of quarterly sales growth. In recent years, shoppers have flocked to Walmart for low-price groceries to offset rising costs elsewhere and as it offers more premium products and fast-shipping services to attract high-income shoppers. The company reports its latest quarterly earnings next week.

OpenAI's Rocky GPT-5 Rollout Shows Strain to Keep AI Lead

Alcantara, Ann-Marie; Berber, Jin . Alcantara, Ann-Marie; Berber, Jin.

[ProQuest document link](https://www.proquest.com/newspapers/walmart-perk-ease-workers-grocery-bills/docview/3239232092/se-2?accountid=14681)

FULL TEXT

OpenAI's newest AI model, GPT-5, was supposed to cement the startup's status as the undisputed leader in the AI race. Instead, it had a tumultuous public launch, frustrating users and prompting Chief Executive Officer Sam Altman to respond. Users flooded social media with examples of how the chatbot failed to answer simple math questions or accurately draw a map of North America. Others criticized its colder tone, reminiscing about older models that OpenAI initially killed off. A new limit of 200 questions a week rankled devotees.

Altman on Tuesday promised to imbue GPT-5 with a "warmer personality," restored a popular model after OpenAI declared it to be obsolete and introduced the capability for users to decide which kind of query they want to make. The company has

learned how much users expect customization, he wrote in a post on X.

Computing capacity has been a concern during the rollout, prompting the company to re-evaluate which users are priorities. The turbulence shows the challenge OpenAI has in selling 700 million active weekly users on new models while being constantly short on computing power, which is expensive and scarce.

The rollout comes at a delicate moment for OpenAI, which is struggling to keep its lead among rivals who are aggressively going after its talent and pouring billions of dollars into artificial-intelligence research. Competitors such as Anthropic's Claude have surged in popularity among coders and business users. Whether GPT-5 will enable OpenAI to win over such customers remains to be seen.

"We expected some bumpiness as we roll out so many things at once," Altman said earlier on X. "But it was a little more bumpy than we hoped for!"

When GPT-5 was released last week, Jason Pollak, a digital-marketing specialist in Atlanta, was excited and thought it would be a perfect expansion from GPT-4. Instead, the model feels "bland, generic" and less like a creative thinking partner, he said.

Pollak pays for ChatGPT and uses it to work on copy, analyze data or create custom tools. The transition from GPT-4 to GPT-5 has been frustrating, he said. "It feels like they took the Ph.D. thing a little too seriously to prove how smart it would be," he said.

GPT-5's release came after a two-year wait in which it experienced delays and setbacks, leading to speculation that either the AI startup lost its edge or that AI development was hitting a wall. Altman dismissed those concerns on a call with reporters last week, saying the startup found new breakthroughs.

(News Corp, owner of The Wall Street Journal, has a content-licensing partnership with OpenAI.)

Juliette Haas, an account-strategy coordinator at a communications and crisis-management agency, primarily uses the paid version of ChatGPT for brainstorming and to complete administrative tasks such as creating a to-do list. With the release of GPT-5, she decided to revisit a business-development prompt to figure out which companies or individuals at her firm would require her support. With GPT-4, the response suggested she build strong industry connections and emphasized the importance of relationship building. GPT-5 delivered a checklist.

"The AI treated finding distressed companies more like a data-science problem rather than understanding the fundamental considerations of relationships and timing," Haas said.

She finds GPT-5 doesn't understand context and subtext as much as GPT-4 did, and GPT-5 delivers more "data-driven solutions."

Jim Marsh, founder of JMC Strategic Intelligence, a consulting firm, uses the premium version of ChatGPT and has been a user since 2022. Marsh said he is impressed with the results of GPT-5, finding that it was able to build a database of his contacts without many errors.

The industry has reached a point in AI innovation where "every release isn't going to be a magic trick," which is perhaps why there is so much criticism about the newest model, he said. "There's still this expectation that AI is going to quickly do more for us without us needing to be involved, and that's generally a false belief," Marsh said.

Amazon to Expand Grocery Delivery

McLain, Sean; Miller, Nicholas G . McLain, Sean; Miller, Nicholas G.

[ProQuest document link](#)

FULL TEXT

Amazon plans a massive expansion of its grocery-delivery business, a move to boost growth in one of the few retail arenas in which it doesn't yet have a dominant position.

The tech giant launched same-day grocery-delivery service in 1,000 cities, including Phoenix, Orlando, Fla., and Kansas City, Mo., and plans to more than double it to 2,300 U.S. locations by the end of the year. The company has also made the service free for Prime members, a move intended to drive orders and increase market share.

Shares of grocery companies fell on the news of Amazon's expansion, with Instacart-owner Maplebear sinking 11.5%, DoorDash down 4.1% and Kroger sliding 4.4%. Walmart was down 2.5%.

Amazon is the largest e-commerce company, but its grocery business hasn't grown as fast as some rivals. Walmart's online grocery business surpassed Amazon's in terms of sales, according to estimates from eMarketer, which tracks e-commerce sales. With thousands of stores, and an army of drivers, the big-box giant can make same-day deliveries to more than 90% of the country.

Amazon has been eager to find new ways to jump-start growth. Recent forays into healthcare, personal computing and physical stores haven't generated the sort of market dominance that the company -- and investors -- have come to expect. Patience is wearing thin on Wall Street. When Amazon's highly profitable cloud-computing arm reported slower growth than some rivals last month, the company's shares dropped around 7%, as concerns mount about Amazon's ability to keep growing.

Amazon Chief Executive Andy Jassy told employees two years ago that the U.S. grocery market was worth \$800 billion -- and he wanted a bigger bite of it. In 2024, the American grocery sector was worth nearly \$875 billion, according to market-research firm IBISWorld.

Amazon has been experimenting in the grocery business for years. It launched its first grocery storefront on its website in 2006 and bought Whole Foods Market for \$13.7 billion 11 years later. The company has built physical stores featuring technology that senses when shoppers pick up an item and charges them automatically. Another offering allows shoppers to pay with a palm scan.

Amazon said it generated more than \$100 billion in gross sales of groceries and household essentials in 2024, not including sales from Whole Foods and Amazon Fresh.

Much of Amazon's grocery business has come from products such as toothpaste and canned goods, items with long shelf lives that can sit in warehouses until they are purchased.

More recently, Amazon has sought to expand its fresh-food business, experimenting with stocking produce and other perishable items at its delivery hubs. In July, the company said that three-quarters of the people who shopped for such items on Amazon this year were doing so for the first time.

To broaden its grocery offerings, the company has been attempting to expand its same-day and next-day delivery capability to a wider geographic area.
